## INTERESTS

I love music, tech, learning, and most of all, people. I taught myself audio engineering, built a PC, a quality music studio, and a vintage styled tube mic. I also enjoy video games, traveling, and researching everything. I'm always looking for ways to improve the quality of every day life. Since I have a knack for audio and tech, I've invested a lot to try and help local artists make music, whether hosting shows for free or working to equip artist for songwriting and music production.
